## INSTRUCTIONS

- Decide on a quantity for each species — **minimum order of 25; orders must be in increments of 25 up to 75 and increments of 100 for orders of 100 or more trees.**
- Find the unit price for each quantity ordered in corresponding column.
- Multiply the quantity by the unit price to get the price for each species.
- For example: If you want to order 300 Scotch Pine 2-0 (two-year-old seedlings): 300 quantity X \$0.50 per tree = \$150.00
- Add the prices to get a subtotal, then add in shipping and handling costs to get a grand total for the order.
